

Test Execution Summary & Defect Reports

Project Name:	Flight Booking Application - Manual QA Testing	Author:	Eleni Avgitidou
Target AUT:	travel.agileway.net/login	Date:	September 2026
Version:	1.0	Status:	Complete

1. Execution Metrics Summary

39 TOTAL DESIGNED	35 TOTAL EXECUTED	31 PASSED	3 FAILED	1 BLOCKED
----------------------	----------------------	--------------	-------------	--------------

2. Identified Defects Summary

Defect ID	Description	Severity	Status
BUG-001	Booking completes successfully when leaving "From" or "To" origin/destination fields empty.	HIGH	OPEN
BUG-002	User is stuck on the Flight Info page after payment with no button to return or book a new flight.	MEDIUM	OPEN
BUG-003	System accepts invalid passenger details (excessive text length or numeric inputs in name fields).	MEDIUM	OPEN

3. Detailed Defect Reports

BUG-001: System allows flight booking completion without entering "From" or "To" fields

Severity: High | Status: Open | Associated Case: SCRUM-T14

Steps to Reproduce:

- Open the "Book Flight" page.
- Leave the "From" and "To" origin/destination fields blank.
- Fill out all remaining required fields with valid data.
- Click "Proceed".

Expected Result: The booking should not complete. An appropriate validation error message should notify the user that origin and destination are required.

Actual Result: No error message is displayed, and the flight booking completes successfully.

Evidence Reference: Screenshot attached to Jira defect ticket (SS on defect report).

BUG-002: Navigation button missing; user cannot return to booking page after successful payment

Severity: Medium | Status: Open | Associated Case: Navigation Flow / Return to Book

Steps to Reproduce:

1. Log in as a valid user.

2. Select a flight and proceed to payment.

3. Complete the payment process successfully.

4. Attempt to navigate back to book another flight.

Expected Result: A clear navigation control (e.g., "Book Another Flight" button) should be displayed on the confirmation page.

Actual Result: User remains stuck on the flight info/confirmation page with no option or button to return to the booking workflow.

Evidence Reference: Screenshot attached to Jira backlog defect ticket.

BUG-003: Passenger details form accepts numeric characters and excessively long string inputs

Severity: Medium | Status: Open | Associated Case: Invalid Passenger Details Scenario

Steps to Reproduce:

1. Navigate to the Passenger Details step during flight booking.

2. Enter numbers or extremely long text strings into the passenger name fields.

3. Submit the form.

Expected Result: The system should perform input field validation, reject numbers/over-length strings, and display an inline error message.

Actual Result: Form submission succeeds without any validation errors or input sanitization.

Evidence Reference: Screenshot attached to defect report.
