

Project Foundation & Requirements Analysis

Project Name:	Flight Booking Application - Manual QA Testing	Author:	Eleni Avgitidou
Target AUT:	travel.agileway.net/login	Date:	September 2026
Version:	1.0	Status:	Complete

1. Project Overview & Scope

Project Objective: Manually evaluate the core functionality, input field validations, navigation flows, and payment gateway integrations for the Flight Booking web application using a structured Agile/Scrum manual testing approach.

Testing Scope:

- In Scope:** User authentication (Login/Sign Up), Flight Selection scenarios (One-Way, Return, Same-day return, Default types), Passenger Details validation, Payment Gateway integration, Responsive UI testing on web/mobile browsers, and Post-booking navigation.
- Out of Scope:** Source code review, Database testing, API testing, Automated execution, Performance/Load testing, and Penetration security testing.

2. Test Environment, Assumptions & Risks

Environment: Tested on Web and Mobile Responsive Viewports using Google Chrome with test cases tracked in Zephyr Scale (Jira Integration).

Key Project Risks:

- UI Specifications:** Missing UI design specifications required evaluating functional logic over visual design verification.
- Date Restriction Logic:** Date restrictions were not fully implemented on target environments (e.g., booking a one-way trip with today's date was blocked/unsupported).
- Validation Handling:** System lacks basic form validations when submitting empty fields or invalid passenger strings (excessive length/numeric values).

3. Folder Structure & Category Summary

Category / Folder	Test Range / Key	Focus Area
Login / Sign Up	Folder: Login / Sign Up	User authentication and initial application access.
Valid Flight Select	SCRUM-T1 to SCRUM-T5, SCRUM-T12	Valid booking flows (Return, One-Way, Same-day return, Default trip types).
Invalid Flight Select	SCRUM-T6 to SCRUM-T11, SCRUM-T13 to SCRUM-T15	Negative scenarios (Past dates, Invalid dates like Feb 30, Empty origin/destination).
Responsive UI	SCRUM-T16	Flight selection layout and usability on mobile/responsive viewports.
Invalid Payment	SCRUM-T23 to SCRUM-T39	Credit card field validations, missing inputs, expired cards, network dropouts.

Category / Folder	Test Range / Key	Focus Area
Passenger & Navigation	Unmapped Execution Cases	Edge-case validation for passenger inputs and end-to-end user navigation flows.
